## Procedures:

### Office Procedure:

Indication for procedure: Neoplasm of uncertain behaviour of larynx.

Procedure: LARYNGOSCOPY-FLEX/RIGID W/STRO, Flexible laryngeal videostroboscopy was performed to evaluate the laryngeal biomechanics and vocal fold oscillation.

Anesthesia: Lidocaine 4%.

Findings: The arytenoids were mobile bilaterally. The right vocal fold had a normal appearance. The left vocal fold was full and erythematous, in particular posteriorly. The fullness was submucosal. There appeared to be mild obliteration of the left ventricle. There was complete glottal closure, and with entrained vibration the right mucosal wave was normal. The left was absent. There was no periarytenoid erythema or edema..

## Assessment/Plan

#	Detail Type	Description
1.	Assessment	Neoplasm of uncertain behavior of larynx (235.6).
